aquafresh

**filter housings
& replacement cartridges**
well known, reliable brands

The filter cartridge is the heart of every water purification system and regular monitoring and timely replacement of the cartridge in your system is the key to a continuing supply of fresh, clean and safe drinking water.

It is important that the correct cartridge is used – many cartridges of similar physical size may fit into your filter housing but may not be the correct 'fit' to ensure optimum flow and filtration.

Call us for advice on replacement cartridges and filter housings for use in home, commercial, industrial and rural applications.

HOME

Sediment, colour, taste, chemical and cyst reduction.

COMMERCIAL

Beverage dispensers, ice makers, coffee machines, aquariums, carwash, laundries.

INDUSTRIAL

Process water, mining, petroleum, printing, automotive, pharmaceutical and laboratory.

RURAL

Sediment, chemical, colour, taste, odour reduction.

WATER TESTING

Basic and NATA certified water analysis.

As well as the physical dimensions of the replacement cartridge you need to also consider other factors, such as: What is the major water impurity issue in your area? Is the cartridge you are using appropriate for the filtering job it has to do?

Cartridges go about their business hidden away from view – you can't see if all is well, although your tastebuds will give you some idea.

Be sure that your investment in water purification equipment is not let down by the weak link of an incorrect cartridge.

Replacement filter cartridges are a major part of our business and we carry a wide range of all the well known, reliable brands. We can give you the right advice on what is ideal for your particular system and take into account the water quality factor in your area.

We offer a phone advisory service and any cartridge requirements can be purchased by credit card with free, prompt delivery to anywhere in Australia.
